FORWARD — PLEASE READ CAREFULLY

It is Iris time once again. With this, our eighth catalog, we wish to greet our many friends and customers and those of you whom we hope to serve in the coming years. The Iris is truly the "Queen of the flower garden, a rainbow come to earth." It is with both pride and pleasure that we offer you many new additions to our list.

Visitors to the gardens are more than welcome. Our blooming season is one of the latest because we are located in the mountains, near the Canadian border. Peak bloom is usually reached the second week in June. You will find our gardens about 36 miles north of Colville, between Deep Lake and Cedar Lake. Come if you can and see nearly six acres in bloom. Iris collecting is our hobby. We are growing many of the older Iris here and many of the very latest Iris that are not listed in our catalog. In all we have collected about 3000 varieties.

The Iris is a hardy plant and can stand more neglect than most flowers. But it does respond to good care. The ideal location for Iris is a sunny, well-drained position. They require at least a half day of full sun and resent continued "wet feet". Iris rhizomes will grow after being out of the ground for long periods of time. The green fans may wither away and the roots dry up, but the bulbs are capable of growing replacements. In fact, if an Iris is transplanted directly from one location to another, they appear to sit and sulk for quite a while before beginning growth. But if they are out of the ground for several days or longer, they appreciate their new location and are conditioned to start growth immediately. Because the embryo bloom stalk for next year's bloom is formed in the Iris rhizome about a month after blooming season is over, the later in the summer that an Iris is transplanted the more likely it is to bloom the first year.

All Iris rhizomes are not alike, some are naturally large while others are very small. The size of the rhizome has nothing to do with the size of the blossoms. Wm. Mohr's bulb is no larger than the end of a woman's thumb, yet it has very large flowers. All part onco bulbs are usually small.

OUR DIGGING AND SHIPPING SEASON WILL START THE 20TH OF JULY and will continue until the 15th of September. Please do not ask for or expect earlier shipment, because our later blooming season does not allow the Iris rhizomes to mature earlier. As far as possible, orders are filled in the order in which we receive them, unless a later date is specified. Hundreds of orders come in every week during March, April, May, June and July and it is physically impossible to fill them all the first week of the digging season. To insure as early shipment as possible, make your selections now and place your orders early.

We ship only quality rhizomes, freshly dug, clean, labeled and well packed. They are guaranteed to be true to name. Because growing conditions in your locality are beyond our control, we cannot replace any Iris lost due to winter kill. During the last four years we have shipped Iris to all 48 states, Alaska, Canada, Norway, France and England. Our gardens are state inspected. We are a member of the American Iris Society and the British Iris Society. We like to do business with flower lovers and have found them to be a reasonable and appreciative group of people.

WE PAY THE POSTAGE. But postal rates and labor costs keep going up, so we have been asked to co-operate with other gardens by placing a thirty-five cent handling charge on all orders. As you know, it is the first pound of postage that costs the most. This fact has forced us to ask for a minimum order of \$3.50. We appreciate the way neighbors have been combining their orders to help with the postage problem.

IRIS ORIGINATIONS OF MELVINA SUITER

We are happy to be able to list in our catalog, again this year, some of the newer Iris from Melvina Suiter of Eagle, Idaho. Mrs. Suiter is a hybridizer, who, for many years, has been going quietly about the work of creating beautiful new Iris that are outstanding for color or color combinations, for their ruffling, lacy edges, satin texture, height, heavy substance or a combination of several of these qualities. After the name of the Iris, we have listed the year of introduction, height, season of bloom, parentage and description.

LIST OF THE OLDER OR HARDER TO FIND IRIS

During the years, we have collected a great many of the older Iris, that are being dropped from other catalogs. They were the outstanding Iris of their day and we feel that their charm should not be lost to the world. We cannot maintain a large supply of each and every one of these because of the space and labor involved, but we do want to make them available to collectors. You may order any of the following for .60 cents each. We would appreciate a few second choices. After the names we have listed the year of introduction and general color class.
